

PIK-MC

Integrated Communications Platform - Mission Critical

PIK-MC is a secure dispatch communication system integrating various radio communication standards. Created with effective crisis management and cooperation between public safety services in mind.

The PIK-MC system provides stable, interference-resistant voice communication, data transmission, and real-time location tracking. By integrating different communication solutions and channels, it enables rapid response in exceptional situations (crises, natural disasters, threats, and rescue operations) and efficient management of dispersed field teams. PIK-MC supports cooperation between services – from rescue to the military – creating a single, cohesive operational ecosystem. It can be used for any other tasks requiring dispatch communication. It operates using public and private LTE/5G cellular networks, satellite communication, and wired networks, maintaining a high level of communication security.

*The heart
of crisis
operations*

ALWAYS IN CONTACT

Integration of various wireless communication means into one system.

OPERATIONAL EFFICIENCY

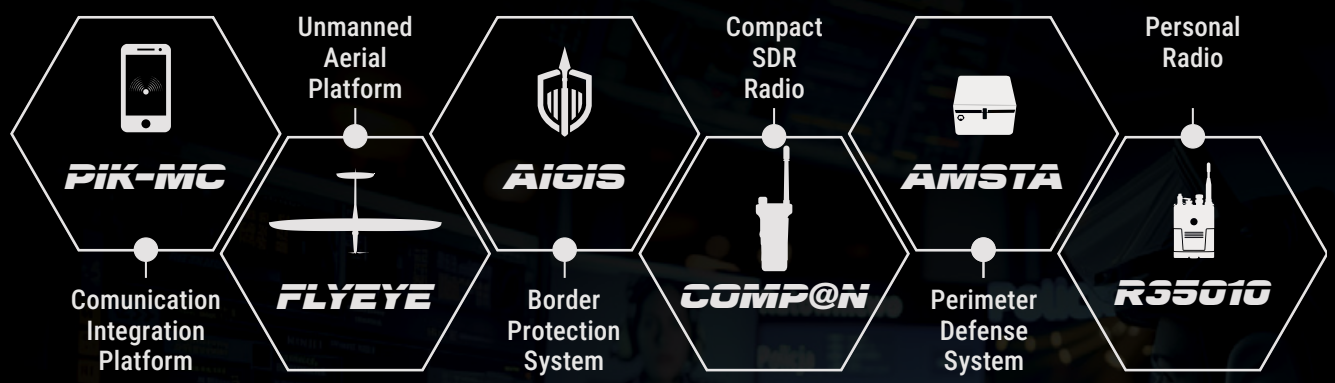

Efficient management of communication and coordination of field teams.

TEAM PLAYER

Cooperation with sensors and other external systems.

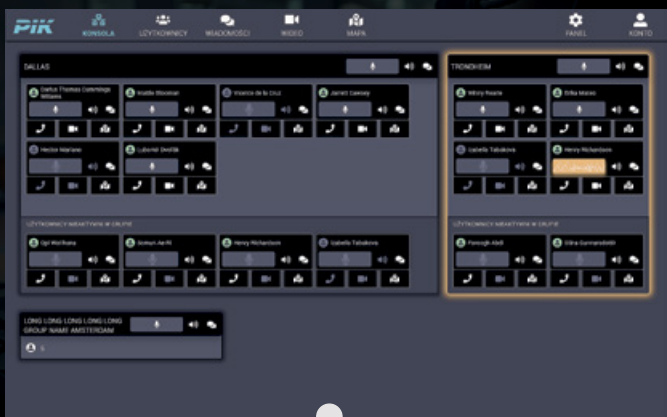

COMPATIBILITY

TECHNICAL DATA

- Compliance with 3GPP Mission Critical standards
- Cooperation with LTE 4G/5G mobile telecommunication networks
- PIM-MC mobile app (Android, iOS)
- Messenger function operating within a secure, closed infrastructure
- Live video streaming from cameras to multiple recipients simultaneously
- Data transmission protected against eavesdropping and manipulation
